---

I know you had asked me for a copy of this a million years ago - sorry for the delay! I am sending you the word version that I think is the last version of the document. I was the only OSC besides Rich Rupert to attempt/complete one in recent memory so who knows if this is correct . I am not sure Rupert even finished his document. I used the EE/CA guidance document heavily even though it is pretty vague for an OSC EE/CA (its being updated the last that I can remember - not sure if the new one is out - there is someone in HQ that is in charge of that and I can find out his name if you'd like). Also, ORC (specifically Heather) made me keep repeating myself a over and over which was very annoying.

On the Crossley side - Mikal send the initial PR for processing to finance yesterday at around 4 - so now we wait. If it gets to the CO by 3:30 each day it can be processed for the following day. Fingers crossed - this part is just a black box to me usually -
